

What Makes Us Different

Experience

J.R. Clancy has been solving rigging challenges for over 120 years. We have **more experience than any other rigging firm in the U.S.**, and have been involved in **thousands** of unique [rigging projects](#). We complement this experience with modern engineering and analysis.

Superior Quality

We are **the ONLY designer, manufacturer, and installer of stage rigging equipment in North America** to have its quality management system certified to the strict [ISO 9001:2000 standard](#).

Safety Engineering

We make a substantial investment every year on product development and testing — **far more than the industry average**. Right from the start, our product designs are done under the supervision of independent Licensed Professional Engineers as outside confirmation of our own work.

Extensive Product Testing

We perform extensive product testing. Destructive testing of products is **carried out by Intertec Testing Services, an independent international testing firm** in order to verify Recommended Working Loads and product strength.

In-House Safety Testing

We utilize a **60' state-of-the-art indoor test tower** at our factory. This tower is used for load testing, cycle testing, and product development.

PQAP (Project Quality Assurance Plan)

Project communication and your satisfaction are ensured with our Project Quality Assurance Plan. This structured plan covers all stages of every project, from bidding to close-out. The PQAP includes **regularly scheduled customer, internal design, and progress reviews**. The goal is to keep every project on time, with no surprises!
